

Specializing in IP-Based Converged Technology Solutions

Our Cupertino Electric team includes industry experts and BICSI-trained professionals who are fluent in advanced technologies and integrated networks.

DATA,
DELIVERED.

Our infrastructure solutions are flexible and reliable, whether you need a high-performance cabling system or a cost-conscious solution. Because we offer comprehensive review, planning, design, installation, commissioning and maintenance services to customers in a variety of industries, our skilled technicians are able to drive optimal performance and efficiency on any project.

EXPERIENCE MAKES A DIFFERENCE

With 60 years of electrical construction experience working for some of the world's most influential companies and public institutions, Cupertino Electric has successfully delivered turnkey low voltage projects for general contractors, development companies, biotech giants and Internet leaders alike. In addition to working with top manufacturers and partners, we offer lengthy systems assurance guarantees to meet the demands of our cutting-edge customers.

TECHNOLOGY SERVICES

- Access control
- Audio visual systems
- Distributed Antenna Systems (DAS)/first responder systems
- Fire alarm and nurse call systems
- LAN network solutions
- RFID asset tracking
- Sound masking and paging systems
- Structured cabling
- Surveillance and security systems
- Wireless networks

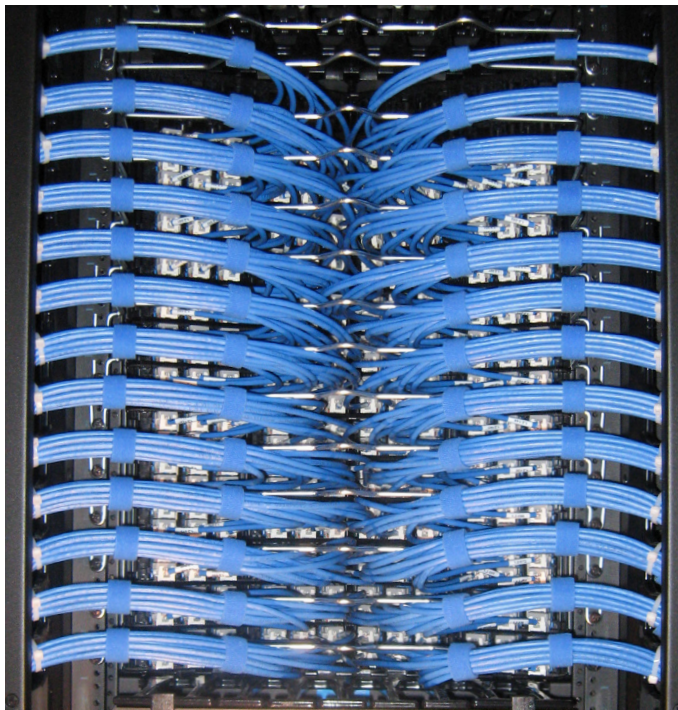

WHY USE RCDD-RECOGNIZED PROFESSIONALS?

Technology infrastructure is complex. This is why it's essential to have someone on your team who understands your challenges. RCDD-designated professionals have demonstrated design, implementation and integration of IT systems and related infrastructure knowledge. This internationally-recognized certification indicates a higher level of knowledge that is often required for work with private and public institutions.

Our RCDD professionals can provide you with the latest information related to:

- Telecommunications spaces
- Backbone distribution systems
- Horizontal distribution systems
- Bonding and grounding
- Telecommunications administration
- Outside plant
- Passive Optical Networks (PON)
